

Problem Definition:

Write a blog web application that has the following ability

1. Ability to decorate the text of the blog (Bold, Underline)
2. Ability to add images along with text

There is not need to have any authentication to the web application.

Tech Stack:

Language - HTML, CSS, AngularJS 1.X, Bootstrap

Server – local Tomcat or any cloud server can be used (AWS, HEROKU etc..)

You can host the web app in cloud or send us the deployable tomcat webapp. Send your code and webapp to yourfriends@trycinema.com. You can also put your code in any repositories like GIT.

Delighters:

Beyond getting the task done, it would be added advantage if your code has the following

1. Followed best practices of angular
2. Organised the code to easily scalable and manageable
3. Deployed in cloud environment – AWS or Heroku
4. Persisted the blog in backend storage

Helpers

You can use following URLs to get started with the task
